Kris Green

(804) 801-2685 | krisgreen305@gmail.com | https://www.linkedin.com/in/kris-green-4815a938a/

EDUCATION

University of Richmond — **Richmond, VA**
B.S. Information Systems/Cybersecurity — *Expected Graduation: May 2028*
GPA: 3.81/4.00

J. Sargent Reynolds College — **Richmond, VA**
A.A.S. Information Systems — *Graduated: December 2025*
Cybersecurity Certificate • Networking Certificate

Relevant Coursework: IT Security Planning & Risk Management • Local Area Networks • Data Literacy • Network Attacks • Computer Crime & Hacking • Cloud Computing Infrastructure & Services

CERTIFICATIONS & SKILLS

Certifications: CompTIA Security+ (expected Nov 2026)
Programming Languages: Python • JavaScript • C++ • Bash • Powershell • Node.js
Tools: Splunk • Wireshark • Metasploit • ServiceNow • OPNsense • Tailscale
Platforms & Technologies: Google Cloud (GCP) • Amazon Web Services (AWS) • Proxmox • Linux • Windows • LLM Agents

WORK EXPERIENCE

Traffic by Intent — **Remote**
Development Security Operations Intern — *March 2026 – Present*

- Building and maintaining CI/CD pipelines on **GCP** (Cloud Run jobs, Cloud Scheduler), securing the environment through IAM and service account management
- Conducting **AI** security risk assessments aligned to SOC 2, identifying risks involving sensitive data exposure, leakage, and improper data use
- Performing automated and manual QA testing across custom LLM MCP servers and scripts
- Developing **python** and **javascript** code, using agentic AI workflows to speed up delivery
- Conducting AI research tasks to optimize workflows, batch outputs, and model reasoning

LEADERSHIP EXPERIENCE

University of Richmond Cybersecurity Club — **Richmond, VA**
Interim President — *August 2026 – Present*

- Lead members through TryHackMe CTF Practice rooms and Cybersecurity workshops
- Facilitated a workshop to help members prepare for industry certifications, and interviews

PROJECTS

Self-Hosted AI Agent Jumpbox

- Designing and implementing a custom MCP server enabling persistent semantic memory for **LLM agents**, using PostgreSQL 17 + pgvector with HNSW indexing over 384 dim embeddings for low latency similarity search
- Enforcing least privilege access for agent to firewall integration: scope API keys to a view-only **OPNsense** user with no shell access and a randomized/unrecoverable password, eliminating standing credentials with write or shell capability

Personal Homelab

- Operated a 4 node Proxmox cluster with a quorum device, hosting self-hosted services and isolated penetration-testing environments
- Deployed OPNsense as the edge firewall with a dedicated physical WAN interface, and Tailscale for secure overlay networking across nodes
- Self-hosted an LLM, NFS-backed NAS, Immich, a media server, and Home Assistant, isolated behind network segmentation, ACLs, and restrictive firewall rules
- Operate a honeypot to capture and analyze real-world attack traffic, using findings to harden firewall rules and detection logic

Penetration Test Report

- Exploited 5+ known **Windows 10** vulnerabilities in a controlled lab and produced a risk assessment for each finding
- Documented a full incident/vulnerability report covering: affected systems and attack surface, root cause and exploit path analysis, business/technical impact assessment, and prioritized remediation recommendations

Capstone: Merged Network Design

- Designed a HIPAA compliant network topology to merge satellite and imaging company infrastructure, integrating both environments under a unified, compliant architecture
- Developed an accompanying security plan covering disaster recovery procedures and risk analysis to support the merged network's regulatory compliance
